## **AI & Culture Quick Insight**

One of the most overlooked risks in leadership transitions is the loss of institutional knowledge. AI tools can now support knowledge capture by organizing documentation, tracking responsibilities, and mapping key relationships. This allows organizations to preserve critical insights that might otherwise leave with departing leaders.

Knowledge transfer should go beyond task lists. It should include decision making context, stakeholder dynamics, and cultural expectations that guide how work gets done. When organizations document both operational and cultural knowledge, they create continuity that supports incoming leaders and reduces disruption.
